DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Claims 2-8 in Paper No. 4 is acknowledged.
2. Claims 1,9-12 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 4.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miller et al (2001/0054008) in view of Hennig et al (6,587,827).

Re - Claims 2 and 3: Miller discloses almost every aspect of the present invention, evidenced through paragraphs 167-178. Miller et al teaches every aspect of the present invention except for the step of generating order data, which includes the specified retailer information, customer information and goods designation information. Hennig et al teaches that it is well known in the art to greater order data, which includes the specified retailer information customer information and goods designation information (see Figures 3 and 4).

Art Unit: 3644

Re - Claim 4: wherein said designation data further includes deliver destination information for specifying a delivery destination of the goods, and said order data further includes the deliver destination information in the designation data (see Hennig Col. 5, line 57 and appendix A Table 1)

Re - Claim 5: further comprising a step of transmitting the generated order data to the first client computer of the retailer indicated by the retailer information in the order data (see Hennig Figure 4)

Re - Claim 6: wherein said packaging material data further includes payment mode information indicating one or more payment modes provided by the retailer indicated by the retailer information in the packaging material data said offering data further includes the payment mode information in the packaging material data, said designation data further includes payment mode designation information disengaging a payment mode selection by the customer based on the payment mode information in the offering data and said order data further includes the payment mode designation information in the designation data. (see Hennig Table 1 #26).

5. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Miller in view of Wilsford as applied to claim 3 above

Re - Claim 7: wherein said goods data includes retailer information indicating every retailer usually selling corresponding goods, (see Miller abstract lines 5-6)

Art Unit: 3644

and the method further comprising a step of extracting order data whose retailer information indicates a retailer different from then that indicated by the retailer information in the goods data corresponding to goods designation information in the same order data and a step of gathering statistics including the retailer information and goods designation information in the extracted order data. (Wilsford teaches that it is now to track customer tendency and compiles statistics for marketing use). It would have been obvious to one having ordinary skill in the art, at the time the invention was made to track customer tendencies for marketing strategy.

6. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Miller in view of ordinary skill in the art. Miller discloses every aspect of the invention except calculating the total price of the goods by adding the price of the goods and the price of the wrapping. However it would have been obvious to one having ordinary skill in the art at the time the invention was made to charge customers for wrapping and packaging the products they purchased because they costs money, and a wise vendor would not engage in an agreement with a client or customer which resulted in a loss of money.
